

Examples of Racial Microaggressions

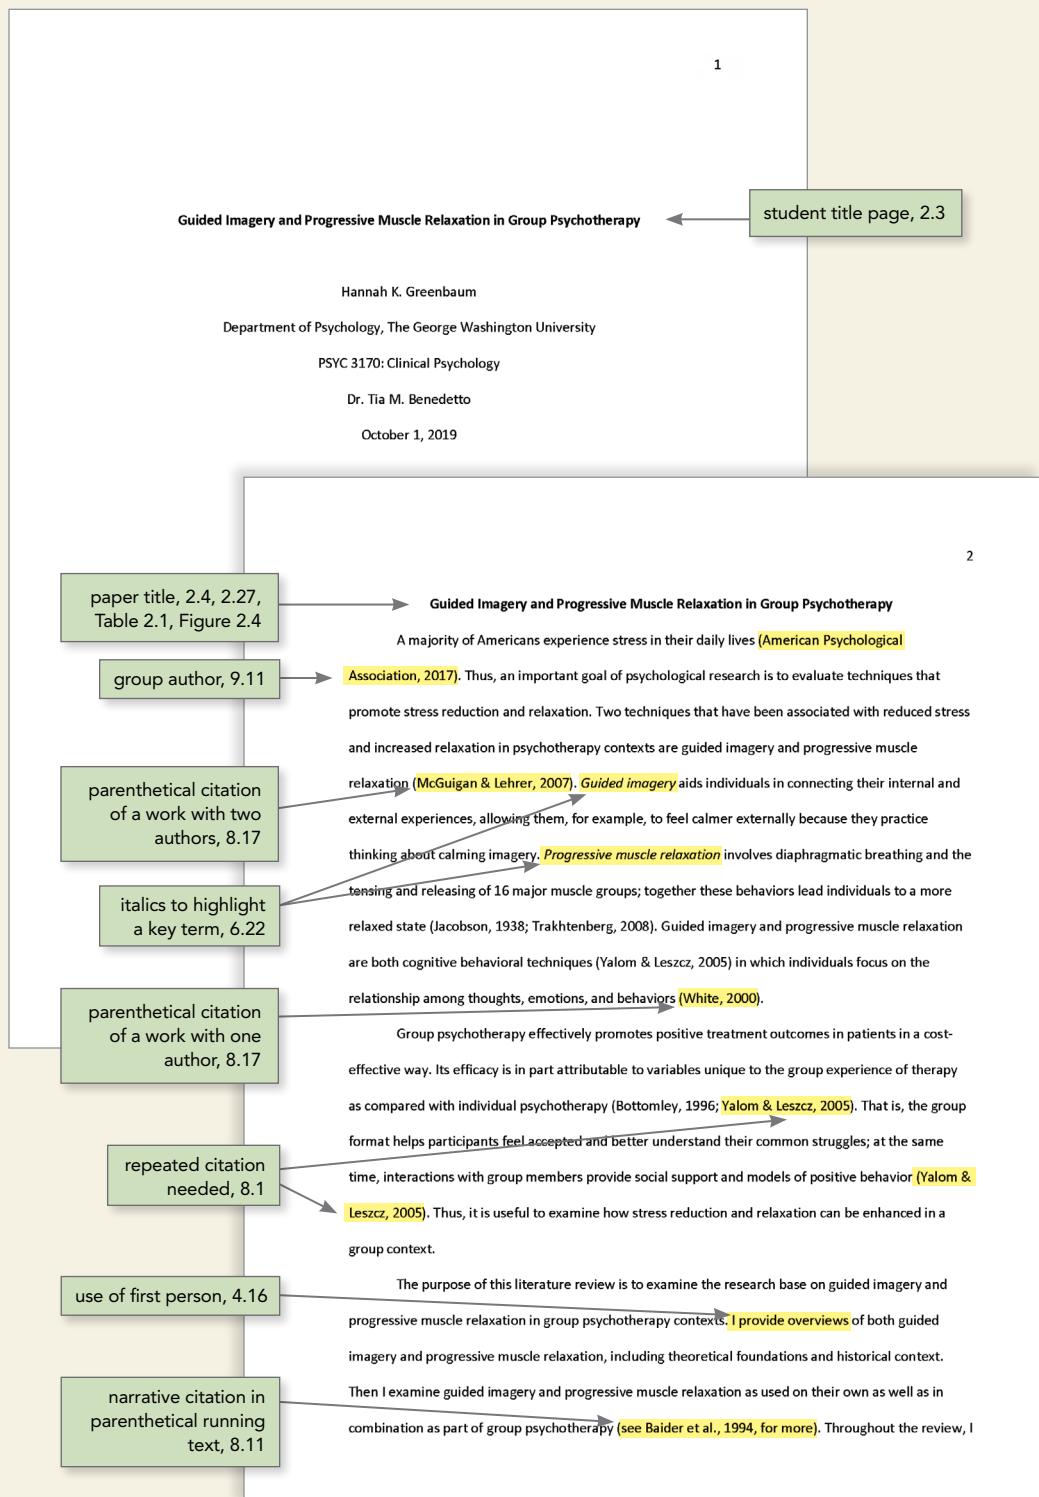

Theme	Microaggression	Message
<i>Alien in own land</i> When Asian Americans and Latino Americans are assumed to be foreign-born	"Where are you from?" "Where were you born?" "You speak good English." A person asking an Asian American to teach them words in their native language.	You are not American You are a foreigner
<i>Ascription of Intelligence</i> Assigning intelligence to a person of color on the basis of their race.	"You are a credit to your race." "You are so articulate." Asking an Asian person to help with a Math or Science problem.	People of color are generally not as intelligent as Whites. It is unusual for someone of your race to be intelligent. All Asians are intelligent and good in Math / Sciences.
<i>Color Blindness</i> Statements that indicate that a White person does not want to acknowledge race	"When I look at you, I don't see color." "America is a melting pot." "There is only one race, the human race."	Denying a person of color's racial / ethnic experiences. Assimilate / acculturate to the dominant culture. Denying the individual as a racial / cultural being.
<i>Criminality – assumption of criminal status</i> A person of color is presumed to be dangerous, criminal, or deviant on the basis of their race.	A White man or woman clutching their purse or checking their wallet as a Black or Latino approaches or passes. A store owner following a customer of color around the store. A White person waits to ride the next elevator when a person of color is on it.	You are a criminal. You are going to steal / You are poor / You do not belong / You are dangerous.
<i>Denial of individual racism</i> A statement made when Whites deny their racial biases	"I'm not a racist. I have several Black friends." "As a woman, I know what you go through as a racial minority."	I am immune to racism because I have friends of color. Your racial oppression is no different than my gender oppression. I can't be a racist. I'm like you.
<i>Myth of meritocracy</i> Statements which assert that race does not play a role in life successes	"I believe the most qualified person should get the job." "Everyone can succeed in this society, if they work hard enough."	People of color are given extra unfair benefits because of their race. People of color are lazy and / or incompetent and need to work harder.
<i>Pathologizing cultural values / communication styles</i> The notion that the values and communication styles of the dominant / White culture are ideal	Asking a Black person: "Why do you have to be so loud / animated? Just calm down." To an Asian or Latino person: Why are you so quiet? We want to know what you think. Be more verbal." "Speak up more." Dismissing an individual who brings up race / culture in work / school setting.	Assimilate to dominant culture. Leave your cultural baggage outside.

Theme	Microaggression	Message
<p><i>Second-class citizen</i> Occurs when a White person is given preferential treatment as a consumer over a person of color</p>	<p>Person of color mistaken for a service worker Having a taxi cab pass a person of color and pick up a White passenger Being ignored at a store counter as attention is given to the White customer behind you “You people ...”</p>	<p>People of color are servants to Whites. They couldn't possibly occupy high-status positions. You are likely to cause trouble and / or travel to a dangerous neighborhood. Whites are more valued customers than people of color You don't belong. You are a lesser being.</p>
<p><i>Environmental microaggressions</i> Macro-level microaggressions, which are more apparent on systemic and environmental levels</p>	<p>A college or university with buildings that are all names after White heterosexual upper class males Television shows and movies that feature predominantly White people, without representation of people of color Overcrowding of public schools in communities of color Overabundance of liquor stores in communities of color</p>	<p>You don't belong / You won't succeed here. There is only so far you can go. You are an outsider / You don't exist. People of color don't / shouldn't value education. People of color are deviant.</p>
<p><i>How to offend without really trying</i></p>	<p>“Indian giver.” “That's so gay.” “She welshed on the bet.” “I jewed him down.” “That's so White of you.” “You people ...” “We got gypped.” Imitating accents or dialects Others?</p>

highlight themes in the research. Finally, I end by pointing out limitations in the existing literature and exploring potential directions for future research.

Guided Imagery**Level 2 heading, 2.27,
Table 2.3, Figure 2.5**

Features of Guided Imagery

Guided imagery involves a person visualizing a mental image and engaging each sense (e.g., sight, smell, touch) in the process. Guided imagery was first examined in a psychological context in the 1960s, when the behavior theorist Joseph Wolpe helped pioneer the use of relaxation techniques such as aversive imagery, exposure, and imaginal flooding in behavior therapy (Achterberg, 1985; Utay & Miller, 2006). Patients learn to relax their bodies in the presence of stimuli that previously distressed them, to the point where further exposure to the stimuli no longer provokes a negative response (Achterberg, 1985).

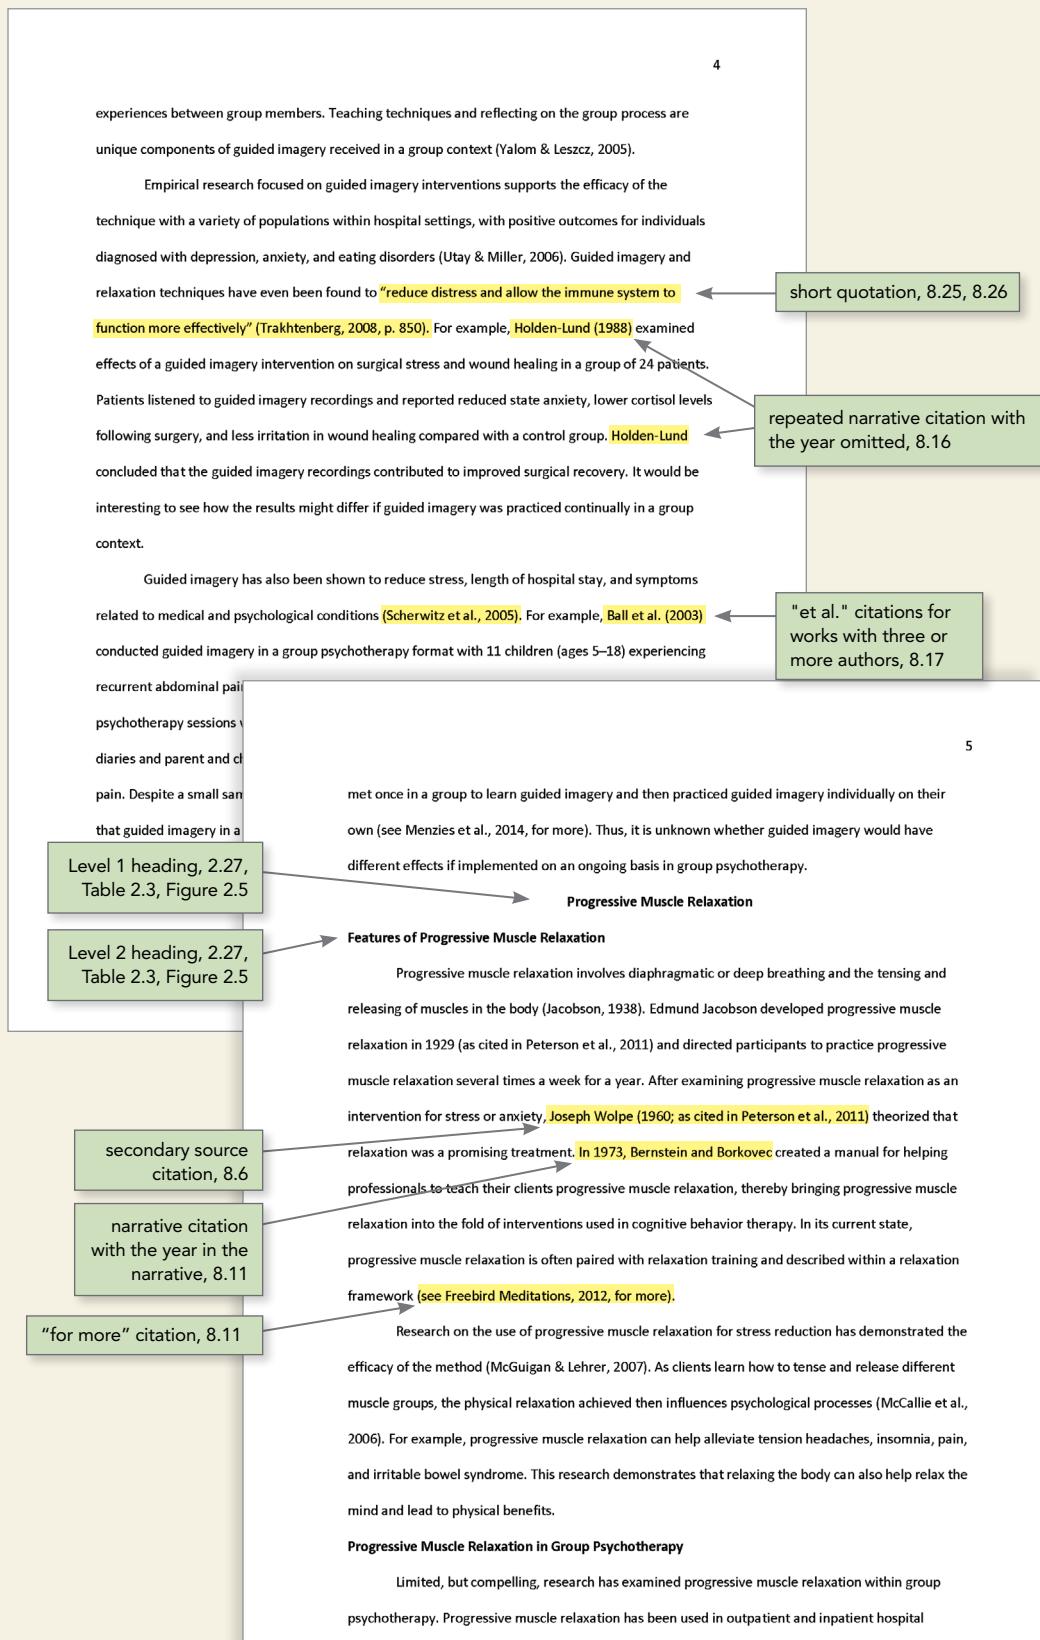

Contemporary research supports the efficacy of guided imagery interventions for treating medical, psychiatric, and psychological disorders (Utay & Miller, 2006). Guided imagery is typically used to pursue treatment goals such as improved relaxation, sports achievement, and pain reduction. Guided imagery techniques are often paired with breathing techniques and other forms of relaxation, such as mindfulness (see Freebird Meditations, 2012). The evidence is sufficient to call guided imagery an effective, evidence-based treatment for a variety of stress-related psychological concerns (Utay & Miller, 2006).

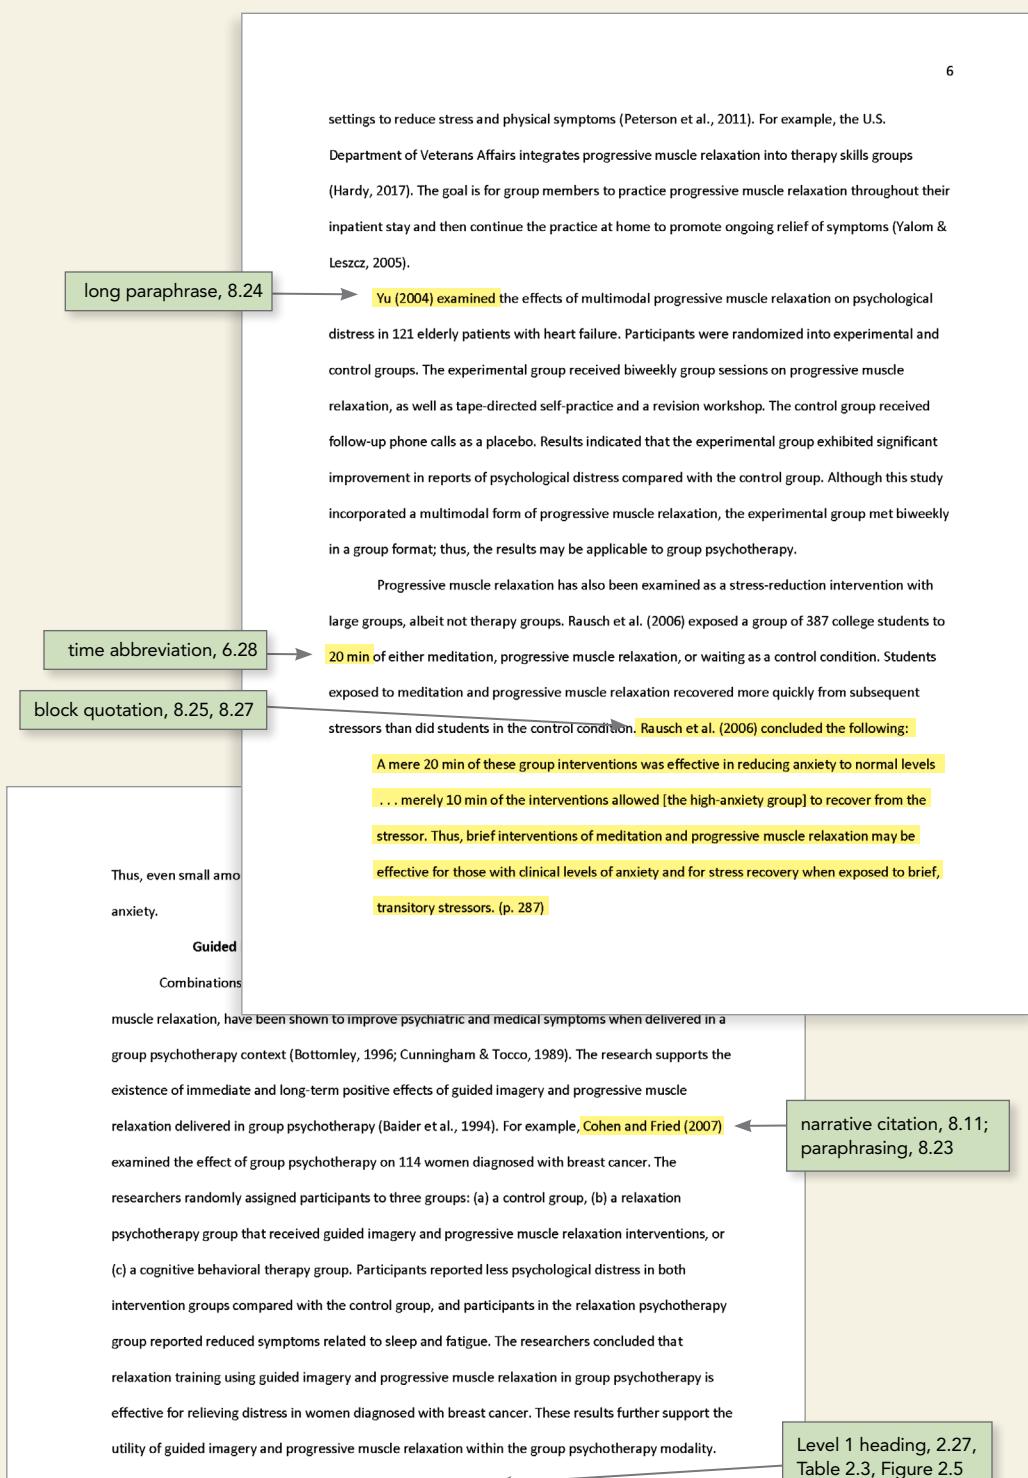

**Level 2 heading, 2.27,
Table 2.3, Figure 2.5****Guided Imagery in Group Psychotherapy**

Guided imagery exercises improve treatment outcomes and prognosis in group psychotherapy contexts (Skovholt & Thoen, 1987). Lange (1982) underscored two such benefits by showing (a) the role of the group psychotherapy leader in facilitating reflection on the guided imagery experience, including difficulties and stuck points, and (b) the benefits achieved by social comparison of guided imagery

Sample Student Paper (continued)

Sample Student Paper (continued)**Limitations of Existing Research**

Research on the use of guided imagery and progressive muscle relaxation to achieve stress reduction and relaxation is compelling but has significant limitations. Psychotherapy groups that implement guided imagery and progressive muscle relaxation are typically homogeneous, time limited,

8

usually expected to practice the techniques by themselves (see Menzies et al., 2014). Future research should address how these relaxation techniques can assist people in diverse groups and how the impact of relaxation techniques may be amplified if treatments are delivered in the group setting over time.

Future research should also examine differences in inpatient versus outpatient psychotherapy groups as well as structured versus unstructured groups. The majority of research on the use of guided imagery and progressive muscle relaxation with psychotherapy groups has used unstructured inpatient groups (e.g., groups in a hospital setting). However, inpatient and outpatient groups are distinct, as are structured versus unstructured groups, and each format offers potential advantages and limitations (Yalom & Leszcz, 2005). For example, an advantage of an unstructured group is that the group leader can reflect the group process and focus on the “here and now,” which may improve the efficacy of the relaxation techniques (Yalom & Leszcz, 2005). However, research also has supported the efficacy of structured psychotherapy groups for patients with a variety of medical, psychiatric, and psychological disorders (Hashim & Zainol, 2015; see also Baider et al., 1994; Cohen & Fried, 2007). Empirical research assessing these interventions is limited, and further research is recommended.

Directions for Future Research

There are additional considerations when interpreting the results of previous studies and planning for future studies of these techniques. For example, a lack of control groups and small sample sizes have contributed to low statistical power and limited the generalizability of findings. Although the current data support the efficacy of psychotherapy groups that integrate guided imagery and progressive muscle relaxation, further research with control groups and larger samples would bolster confidence in the efficacy of these interventions. Attrition is another consideration. Attrition rates and changes in mental health status over time are important factors to consider when evaluating the effectiveness of these interventions.

participation (L. Plum, personal communication, March 17, 2019). Despite these challenges, continued research examining guided imagery and progressive muscle relaxation interventions within group psychotherapy is warranted (Scherwitz et al., 2005). The results thus far are promising, and further investigation has the potential to make relaxation techniques that can improve people’s lives more effective and widely available.
